

RandomWalkPrograms

1. These programs will only run on Macintosh computers.
2. You must first install the included the file "LabVIEW2009RuntimeEngine.dmg". To do this, double click it and follow the onscreen instructions. You may need to restart your machine when you are done.

The file can also be downloaded from the National Instruments Website at:

<http://joule.ni.com/nidu/cds/view/p/id/1377/lang/en>

3. To run a program, look in the folder for programs with the extension ".app" and double click them. The program will launch.
4. Set the parameters as you see fit according to what you want to learn.
5. To run the program either click on the forward arrow in the top left of the simulation window or under the "Operate" menu at the top of the page, pick the item "Run."
6. I hope you learn a lot from running these simple but illustrative models.
